

# STUBBLE CRUNCHER EXHAUST FERTILISER

## IS YOUR SOIL EXHAUSTED

**Exhaust Fertiliser is your next step in efficient conservation farming. This simple roof mounted system cools exhaust gas so it can be directed into the air intake of your air seeder to be used as a fertiliser.**

### **BENEFITS OF EXHAUST FERTILISER:**

- REDUCE FERTILISER RATES. STIMULATE BIOLOGY.
- Captures Carbon, Nitrogen, Calcium, Phosphorous, Iron and Zinc that would otherwise be lost to the atmosphere.
- Coats your seed with these elements and warm moist air while seed is being distributed, giving a faster germination.
- Placed in the furrow with seed.
- Years of financial, soil and environmental benefits.
- Everything in exhaust gas is beneficial to plants.
- Recycling at its best, get maximum benefit out of your fuel.
- Reduce your carbon footprint.

### **TRACTOR ROOF MOUNTED BENEFITS:**

- Very safe with all hot points out of reach.
- Air temperature off the roof is safe and can be ducted through easy to obtain, easy to use, cheap materials, like PVC pipe and flexible hose.
- Because it is on the tractor it can be used on multiple implements, like air seeder (sowing or cultivating), deep ripper or offset disc.
- Out of the way and easy to mount without crowding the air seeder.
- No air seeder modification needed.
- Can be kept when updating air seeder or tractor.
- No extra hydraulic outlets needed.
- Fans automatically control output temperature. Set and forget.
- Australian designed and made. DIY installation kit.

Developed by David Finch and Colin Harper of Harper's Stubble Cruncher.
